

(a) Propose

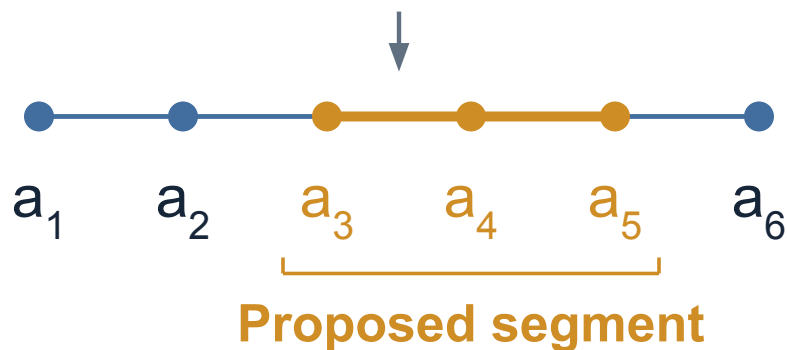

Contrast trajectories in a GRPO group

Success ✓

Failure ✗

Agentic Judge

Proposes a potentially consequential segment

Judge determines where to evaluate

(b) Verify

Sample continuations from boundaries

$$\Delta = 0.75 - 0.50 = +0.25$$

Outcomes estimate segment advantage

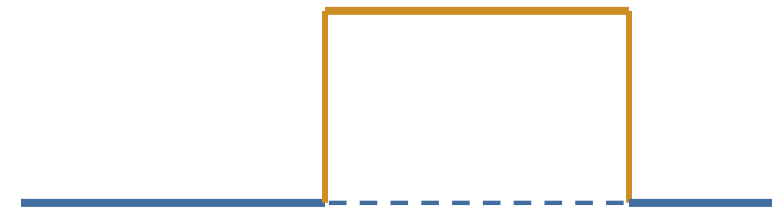

(c) Credit

Assign positive segment-level credit

Policy token advantage

$+\Delta$

GRPO advantage

$$A = A^{\text{GRPO}} + \max(\Delta, 0)$$

Assign additional credit to segment tokens
